Preparation work - We'll be setting up the site ready for the renewal. The tasks can include delivery of new rail, stones, and sleepers to the track area, marking of underground assets such as wires and drainage pipes and possible vegetation removal.

Main renewal - Using an engineering train to remove the old track and components and replace them with new (This usually takes place during a full closure of the railway and can be noisy)

Follow-up work – We'll revisit the area with an engineering train called a tamper to pack the track stones under the rail, providing a smooth journey for our passengers.

The nature of our work often means some noise is unavoidable. We're aware we will be working close to your home and will try to minimise this as much as possible, but we're sorry if we do disturb you.
